

# What to do...

1. Choose a book. Lie down on the floor.
2. Ask someone to count how many books you can fit along your length.
3. Repeat this, measuring how long your partner is in books.
4. Draw yourself with the right number of books alongside.

## How long are we?

This activity will help your child to understand the concept of length, and how we measure and compare lengths using a unit – in this case a book. Help your child to count, and ensure that they don't leave gaps between each placing of the book. They may need help with the drawing too!
