

Line of 20p

This activity allows your child to focus on different coins. Help them to identify the coins by name and then to add each coin that they place in the line, keeping a running total as they go. Their line must equal 20p!

What to do...

1. Make a line of coins. The whole line can be as long as possible. But it should add up to 20p.
2. Draw each coin in the line and bring your drawing into school. Be sure that your line of coins makes 20p!
3. If you have time make more than one line of coins which adds up to 20p.

Hey look! My line's longer than yours.

That's because you have more money in your piggy bank than I do. I bought that pack of stickers yesterday.
